

CHAIR JODEY ARRINGTON HOUSE BUDGET COMMITTEE

Chairman Arrington, Health Care Task Force Chair Burgess *Request Investigation* into Obamacare Program Driving Deficits

WASHINGTON, D.C. – Today, House Budget Committee Chairman Jodey Arrington (R-TX) and Budget Committee Health Care Task Force (HCTF) Chair Michael C. Burgess, M.D. (R-TX) sent a <u>letter</u> to Comptroller General Gene Dodaro of the U.S. Government Accountability Office (*GAO*) <u>requesting an updated report</u> on the cost of the Center for Medicare and Medicaid Innovation (*CMMI*) and its effect on the federal budget.

THE RELATIONSHIP BETWEEN FEDERAL SPENDING AND CMMI

- The Patient Protection and Affordable Care Act (*PPACA*) established the Center for Medicare and Medicaid Innovation (*CMMI*) within the Centers for Medicare and Medicaid Services (*CMS*) to test new approaches to health care delivery that could curb spending while providing better care.
- In establishing CMMI, the law provided CMS with additional authority when testing new health care delivery and payment approaches, known as "*models*."
- The creation of CMMI also provided a permanent mandatory appropriation stream for testing models—<u>\$10 billion for the CMMI's activities for the period</u> <u>of fiscal years 2011 through 2019</u> and <u>\$10 billion every decade beginning in</u> <u>fiscal year 2020</u>.
- In 2010, the nonpartisan <u>Congressional Budget Office (*CBO*) originally</u> <u>estimated funding for CMMI would result in net savings of \$1.3 billion over</u> <u>the ten-year budget window</u>.

- A September 2023 report from CBO revised the agency's prior analysis, estimating CMMI's activities <u>increased direct spending by \$5.4 billion, or 0.1</u> <u>percent of net spending on Medicare, between 2011 and 2020.</u>
- <u>CBO now currently projects that CMMI's activities will increase net federal</u> <u>spending by \$1.3 billion, or 0.01 percent of net spending on Medicare, over the</u> <u>center's second decade, which extends from 2021 to 2030</u>."

COUNTING THE COST OF CMMI

Established by Obamacare with the goal of saving taxpayer money and improving the quality of care for beneficiaries, <u>CMMI has failed to deliver on its mandate</u>.

In 2010, the Congressional Budget Office (CBO) *projected* that CMMI would produce net savings over the 10-year budget window. CBO *revised* its analysis last year, **finding that CMMI is not saving tax dollars but rather has** *increased* **federal spending by billions of dollars**.

In the <u>letter</u> penned by the House Budget Committee's Health Care Task Force, the committee requests that GAO issue a report updating previous <u>work</u> it has done on CMMI focusing on its use of dedicated mandatory funding and an assessment of its performance.

The letter directs GAO to examine the following:

- *How* CMMI has **used dedicated funding to develop models** and carry out other agency functions;
- *How much* of CMMI's first **\$10 billion mandatory appropriation did CMMI utilize prior to receiving its second \$10 billion** in funding in Fiscal Year 2020;
- *The status of* CMMI's testing of models, including **models that have saved money** or **increased spending per the Administration**; and
- *How* CMMI determines what types of providers to include in models focusing on <u>the discrepancy between the number of models focused on</u> <u>primary care physicians</u> *compared to* specialists.

BACKGROUND

The letter follows a recent <u>HCTF member roundtable</u> focused on examining why CMMI is adding billions to the national debt, rather than generating budgetary savings as the program intended.

The roundtable brought together <u>members of the HCTF</u>, CBO Director Phillip Swagel, and Demetrios Kouzoukas of Paragon Health Institute, who previously served as the head of the Medicare program under the Trump Administration.

<u>**Pictured left to right:**</u> Demetrios Kouzoukas with Paragon Health Institute, HCTF Chair Michael C. Burgess (R-TX), CBO Director Phillip Swagel, and Rep. Rudy Yakym (R-IN)

Members, CBO, and stakeholders discussed how mandatory health care programs are the primary drivers of our nation's out-of-control <u>\$34</u> trillion in national debt.

The CBO baseline shows that spending on major health care programs will exceed \$3.2 trillion in 2034, three times larger than the amount projected to be spent on national defense in the same year. As a result, we must conduct budgetary oversight of mandatory health care programs such as CMMI that are adding to our national debt and not delivering for taxpayers or patients.
